

Operations (Resource Scheduling) - Worker Calendar Functionality Updates (14373, 14556, 14531) [Enhancement]

Last Modified on 01/26/2023 9:44 am EST

The following functionality updates have been added to the Worker Calendar:

- New right click functionality has been added to the Worker Calendar with a single 'Add Availability Exception' option. When the exception includes a note, the note will display on the calendar after the exception type. Hover over the note to view it in full. Exceptions display as a hyperlink and will open the 'Edit Worker Availability Exception' when selected.
- An 'Edit Schedule and Capabilities' link has been added above the calendar display in the Worker Calendar. When selected, the Worker Availability and Capability screen will open. After edits are made to the worker's availability/capability, use the Back button located in the Index to return to the Worker Calendar. Upon return, the calendar will update reflecting the recent change.

The Worker Calendar is accessible through Operations > Dispatch tools and the new Operations > Resource Scheduling tools.

The screenshot displays the Worker Calendar for Albert Taylor. At the top, there is a header with the worker's name and a navigation bar. A red box highlights the 'Edit schedule and capabilities' link. The calendar shows dates from Nov 27 to Dec 24. A modal window titled 'EDIT WORKER AVAILABILITY EXCEPTION' is open, showing the following details:

Field	Value
WORKER	Albert Taylor
TYPE	Sick
START DATE	12/12/2022
END DATE	12/12/2022
NOTE	Called in sick

Buttons for 'SAVE' and 'DELETE' are visible at the bottom of the modal. A red arrow points from the 'Sick-Called in sick' exception on the calendar to the modal window.

Pathway: [Operations](#) > [Resource Scheduling](#) > [Worker Availability and Capability](#) - Select worker's name to open Worker Calendar; [Operations](#) > [Dispatch](#) - Select worker's name to open Worker Calendar
