

Notification Template

Last Modified on 11/22/2024 12:54 pm PST

Pathway: Setup > System > Notification Template

The Notification Template tool is used to create custom email/text notifications for use throughout the Navusoft application. Some templates may require a ticket to be submitted to customer service for additional setup and training.

Permissions

The following permission is required to add and edit notification templates:

Permission ID	Permission Name
120	Setup \ System and Security

Fields and Descriptions

Field	Description
Type	Categorizes and controls where the notification is available for use.
Name	The Name of the template.
Active	Identifies if the template is available for selection and use.
Email Design	

Default Subject	Entries made here will display in the subject line of the email. For system-generated emails, the default subject cannot be modified prior to sending. However, in certain areas where users can choose a template, such as the <i>Send Email</i> feature in Customer Details, the subject field can be edited.
Content Type	Option to compose the message in either text/html or text/plain. For best formatting, text/html should be used.
Default Message	Text field to compose the body of the email.
Key Paths	System paths that are used to pull information specific to an account into the message body. When composing a message, double click on the key path to add it in the cursor's location. As the email is sent, the system will look at the key path to pull the customer's information and include it in the message. This allows for users to create one email for generic use across many accounts.
Text Message Design	
Default Message	Text field to compose the body of the text.
Est. Character Count	Calculates the approximate number of characters in the text message.
Key Paths	System paths that are used to pull information specific to an account into the message body. When composing the message, double click on the key path to add it to the message. When the text is sent, the system will look at the key path to pull the customer's information. This allows for users to create one email for wide use across accounts.

Template Types

The following section details each of the template types and where they are used in the application.

Template Type	Use Locations in the Application	Description
Proposal	<ul style="list-style-type: none"> Customer Service Screen (Orders, Quotes and Contracts) 	Template used to email a proposal.

Understanding Keypaths

Keypaths are data points that the system uses to extract account- or site-specific information and insert it into notification emails and texts, allowing notifications to be universally used across all accounts. In the example below, a Welcome notification is created for new accounts. When the email is sent, the system user sees the keypaths, but the customer only sees the specific information the keypaths extract from the data table.

Add Notification Template: Email Design

1. Click the **green +** to open the **Add Notification Template** tool.
2. Select a **Type** from the drop down to create the template in. This controls the availability of the template in other areas.
3. Enter a **Name** for the notification template.
4. Set the **Active** status for the template to 'Yes'. Otherwise, if set to 'No', the template will not be available for use.
5. Select the **Response Request Type** to identify how a response from a notification is categorized in Account Request Management.
6. Select the **Email Design** tab.
7. Create a **Default Subject** for the email. This will display in the Subject box of the email.
8. Select the **Context Type**. Text/HTML is recommended for best formatting.
9. Compose the body of the email in the **Default Message** field. Double click on a **Key Path** to insert customer specific information into the message. Customer information only displays for the recipient of the email.
10. Click **Save** when finished.

Add Notification Template: Text Message Design

Consider reducing the size and complexity of a message that will be sent as a text. An estimated character count displays on the screen to help track and manage the size of the text.

1. Click the **green +** to open the **Add Notification Template** tool.
 2. Select a **Type** from the drop down to create the template in. This controls the availability of the template in other areas.
 3. Enter a **Name** for the notification template.
 4. Set the **Active** status for the template to 'Yes'. Otherwise, if set to 'No', the template will not be available for use.
 5. Select the **Response Request Type** to identify how a response from a notification is categorized in Account Request Management.
 6. Select the **Text Message Design** tab.
 7. Compose the body of the text in the **Default Message** field. Double click on a **Key Path** to insert customer specific information into the message. Customer information only displays for the text recipient.
 8. Click **Save** when finished.
