

Work Type Setup (Operations) - New Setting Added to Work Type for NavuNav (15561) [Enhancement]

Last Modified on 08/03/2023 4:08 pm EDT

The following changes have been made to the Add Work Type screen in Work Type Setup:

1. The 'Work Type' tab has been renamed to 'Details.'
2. A new 'NavuNav Settings' tab has been added.
 - NavuNav settings previously available in the Details tab have been moved to the NavuNav Settings tab.
3. A new 'Return To Route List On Completion of WO' setting was added in NavuNav Settings.
 - If enabled, the driver will be returned to the route list after completing the work order in the Stop Details screen.

The screenshot displays the 'WORK TYPE SETUP' interface. At the top, there is a 'LINE OF BUSINESS' dropdown menu set to 'Roll Off'. Below this is a table with columns: ID, NAME, LOB, ACTION CATEGORY, INVENTORY MOVE TYPE, MANIFEST NOTIFICATION, ORDER BASELINE SECONDS, DEFAULT SECONDS PER UNIT, CREATE ONE SERVICE RECORD PER QUANTITY, and ENABL DISPO MATEF ENTRY. A modal window titled 'ADD WORK TYPE' is open, featuring two tabs: 'Details' (marked with a red '1') and 'NavuNav Settings' (marked with a red '2'). The 'NavuNav Settings' tab is active and contains four settings, each with a dropdown menu set to 'No': 'ENABLE DRIVER PHOTO PROMPT', 'ENABLE DRIVER ENTERED LABEL WEIGHTS', 'ENABLE DRIVER TO SET IN PROGRESS', and 'RETURN TO ROUTE LIST ON COMPLETION OF WO' (marked with a red '3'). A 'SAVE' button is located at the bottom of the modal. At the bottom of the main screen, there are 'Alerts' and 'Surcharges' buttons, and a 'NOTIFICATION TYPE' field.

Pathway: Setup > Operations > Work Type > select to Add Work Type
