

NavuNav (Android) - Logic Fix to Logging End Miles (14816)

Last Modified on 09/14/2023 3:19 pm EDT

The logic for the odometer entry field during driver clock-out has been enhanced to generate an error if the driver enters an end odometer reading that is lower than the start odometer reading.

The screenshot shows the 'Check Out' screen in the NavuNav application. The screen has a green header bar with the time '1:52' and battery level '71%'. Below the header, there is a back arrow and the text 'Check Out'. The main content area contains several input fields: a dropdown menu for 'Truck' with the value '953', a 'Start Time' field with '01:50 PM', a 'Mileage' field with '10456', an 'End Time' field with '1:52 PM', and a 'Mileage' field with '10766'. The 'Mileage' field with '10766' is highlighted with a yellow background. At the bottom of the screen, there is a green button labeled 'Set'.

Pathway: NavuNav > Timers > Check Out
