

AR Payment Batch (Accounting) - Batch Timestamps Displaying Incorrect Time Batch Was Created (16857)

Last Modified on 05/29/2024 2:33 pm EDT

An issue in AR Payment Batch that caused the timestamp for batch creation to display the incorrect time has been resolved. The timestamp uses the time zone assigned to the division to reflect when the payment batch was created.

The screenshot shows the 'AR PAYMENT BATCH' interface. At the top, there are filters for PERIOD (May 2024), DIVISION (HOUSTON), and BANK ACCOUNT (All). Below the filters is a table of batches. The table has a header 'BATCH #' and a list of batch numbers: 11293, 11320, 11326, and 11329. A mouse cursor is hovering over the batch number 11329, which has triggered a tooltip. The tooltip displays the name 'David Navarro' and the timestamp '05/22/2024 9:28 am'. A red arrow points to the timestamp in the tooltip.

BATCH #
11293
11320
11326
11329
