

# Scale Photos (NavuNav)

Last Modified on 08/15/2025 7:42 am PDT

**Pathway:** *NavuNav > Scale Photos [Application]*

The NavuNav Scale Photos application, similar in design to Navusoft's Inbound/Outbound screen, allows scale operators to quickly create inbound scale tickets from a mobile device. By enabling operators to initiate tickets while walking the truck line during backups, the Scale Photos application helps improve scale house efficiency and reduce wait times.

## Permissions and Requirements

### Permission

The following permission is required to display the Scale Photos button on the Select Application screen:

Permission ID	Permission Name
99	Inbound/Outbound Processing

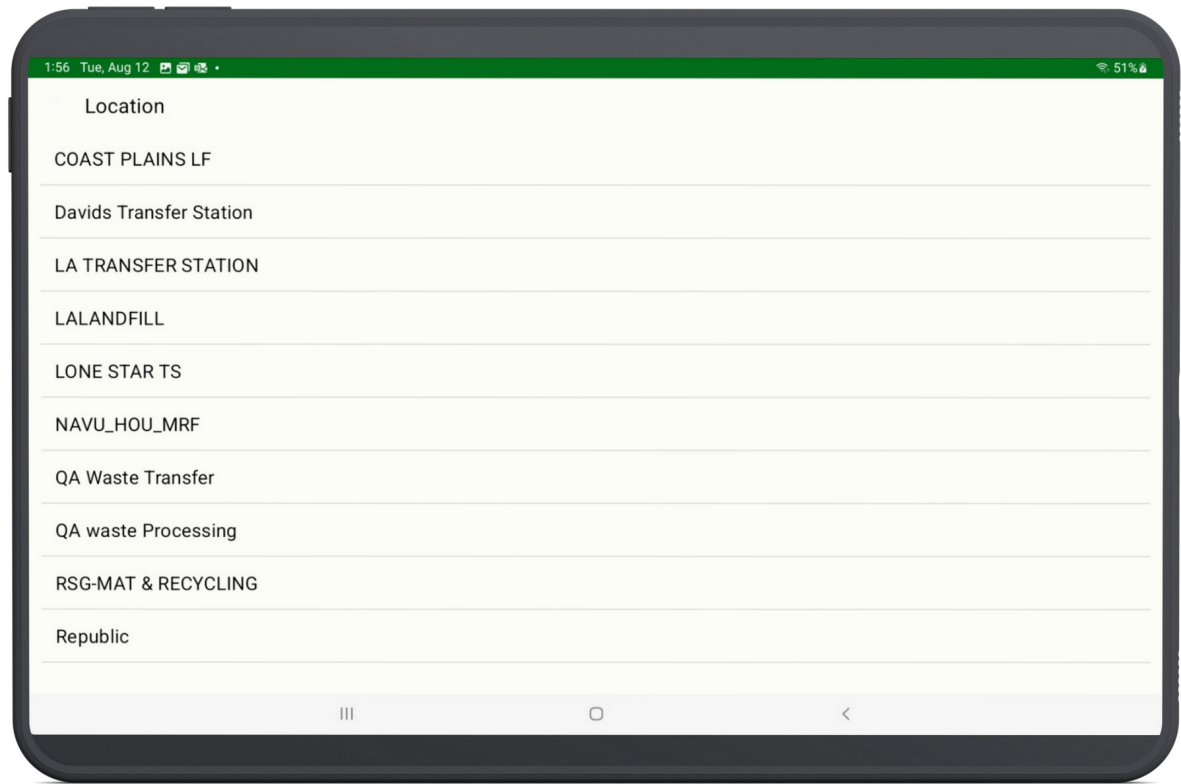

### Requirement

An internet connection is required to use the Scale Photos application.

## Location List

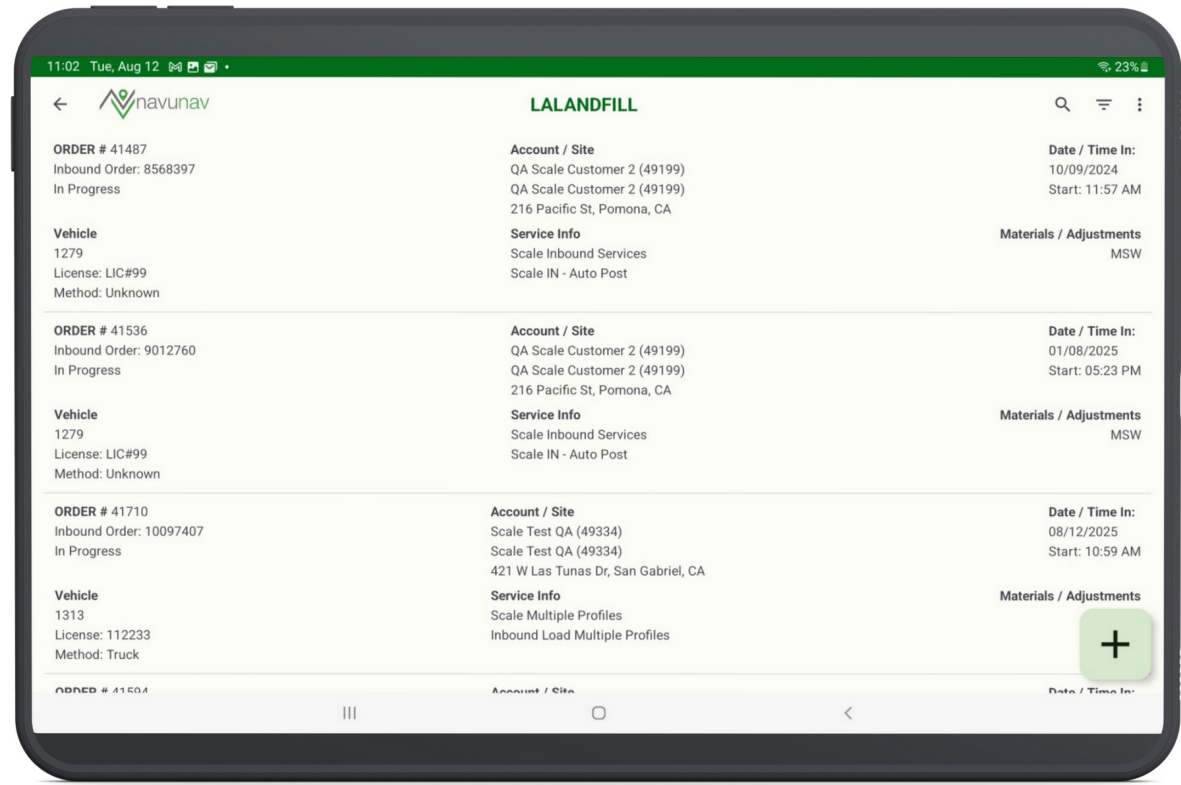

After selection of the Scale Photos option from the Application Selection screen, users will be prompted to select

the disposal or transfer facility that applies.

## Facility

After a location selection, the selected facility's Inbound screen is displayed. From here, users will be able to review existing inbound work orders and add new ones.

### Screen Icon Descriptions

Four icons are displayed along the top of the Location screen that include:

Icon	Description
<b>Back</b>	Returns the user to the Location selection screen.
<b>Search</b>	Provides ability to search through the work orders for a specific work order.
<b>Filter</b>	Option to filter the work orders on Inbound or Outbound.
<b>Logout</b>	Select to logout of the Scale Photos application.

### Search

The Search screen and its features use the same setup, preconfigurations, and processes as the *Operations > Inbound* screen in Navusoft.

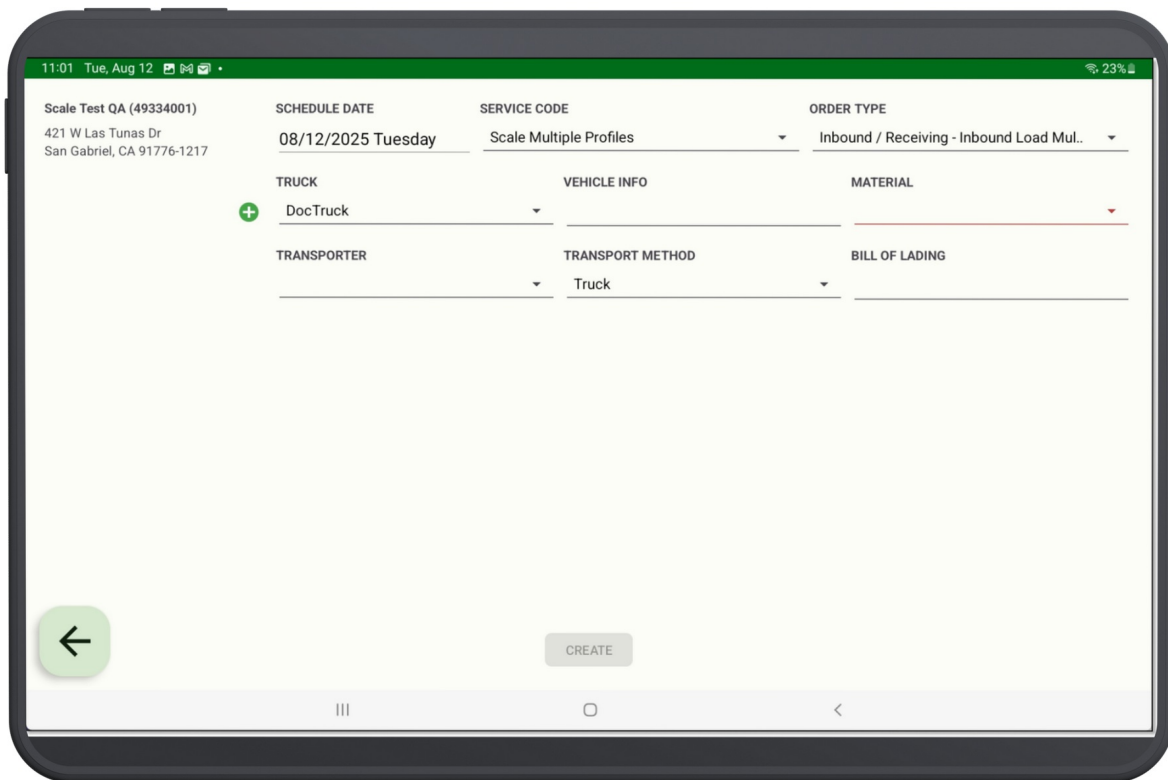

## Search Type Options

Searching with any method here requires at least two characters. The search types in the Scale Photos mobile app match those in the *Operations > Inbound* screen in Navusoft. This field can be defaulted to a specific setting in **Facility Setup**. If **Truck** is selected, the system searches the site inventory for matches by truck name or license plate number. Available search type options include:

Search Option	Special Notes
Route	N/A
Waste Profile	N/A
Site	For cash pay customers, refer to the <a href="#">Scale-In Setup</a> article on creating a site specific to Cash Pay to record cash pay customer transaction and payments on.
Truck	Boost efficiency and keep inbound traffic moving smoothly by preconfiguring your site's trucks and their license plate numbers in <i>Customer Service &gt; Site Inventory &gt; Trucks</i> .
Work Order	Work orders created in Customer Service can be searched here, provided they use an inbound-type service code and work type.

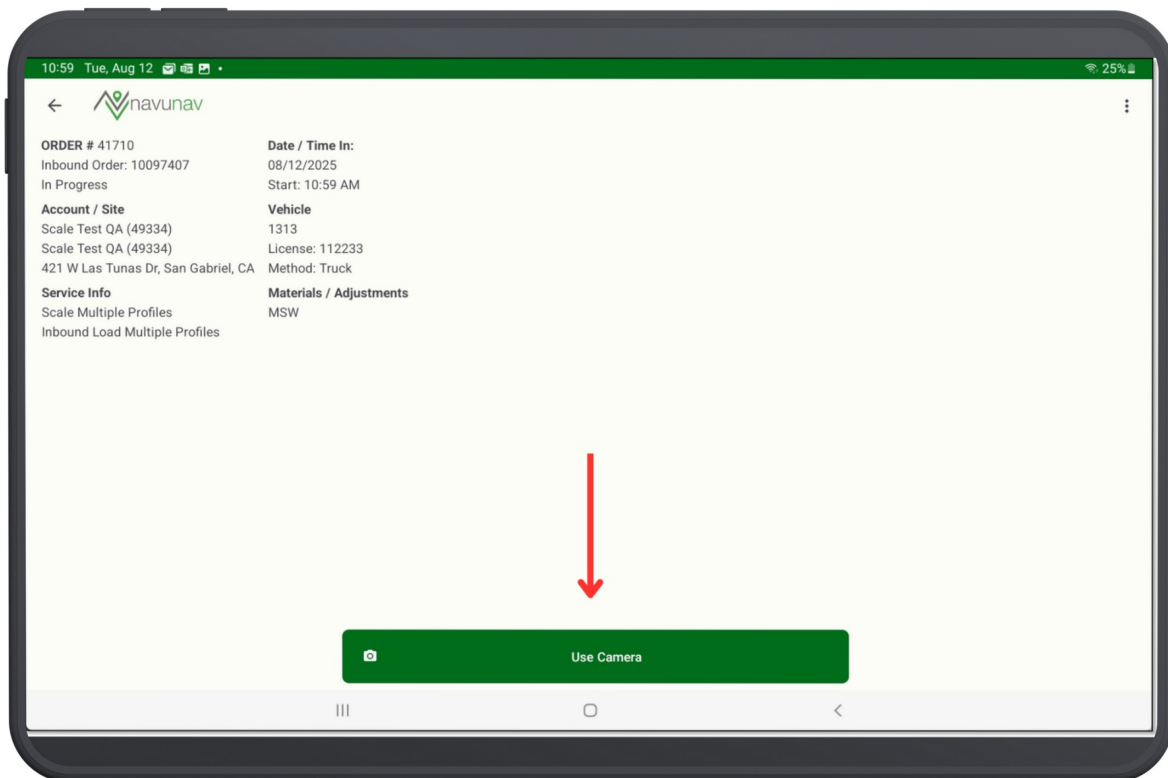

## Create an Inbound Order

As in the *Operations > Inbound* screen in Navusoft, users can quickly create an inbound ticket and add a new truck when needed.

## Photo Capture

After creating a ticket, select the *Use Camera* button to capture a photo. If multiple photos are taken, the most recent appears first, and the user can scroll left to view the others.

## Related Articles

The following articles cover general scale setup and processes in Navusoft. Since the Scale Photos mobile application closely mirrors the screens and workflows in *Operations > Inbound*, **any setup changes will affect both interfaces.**
