

NavuNav (Android 6.6) - Enhancement to Add 'Optimize Route' to Driver App (19281) [New Feature]

Last Modified on 11/11/2025 12:36 pm PST

The NavuNav driver application now supports route optimization, providing drivers with the same optimization functionality available in Dispatch. This enhancement applies to systems with RouteSmart enabled and configured, and the feature can be accessed from the application menu as **Optimize Route**.

Additional Logic and Callouts:

1. **Start Location and End Location:** The **Custom Location** option is excluded.
2. **Optimization Type:**
 - The **Optimize Routes** option is excluded.
 - **Insert Unsequenced Stops** is only available if there is at least one stop with a service record sequence of 0.
3. **Scope of Optimization:** Route optimization applies only to stops scheduled for the current day.

This feature is available only when the following system requirements are met:

- RouteSmart is enabled system-wide.
- Route optimization settings are configured.
- The driver has permission **366 (Optimize Selected Routes in Dispatch or NavuNav)**.
