

Automated Route Integrity Cleanup to Prevent Routing Issues (18858, 19387)

Last Modified on 11/25/2025 11:03 am PST

A Route Integrity process has been implemented to enhance routing reliability by ensuring routine data discrepancies are automatically reviewed and corrected. Examples this includes:

- Ending duplicate site service schedules for the same day
 - Delete future service records that exist past the end of the schedule
 - Correct service record's route after a site is moved between divisions
-
