

NavuNav (Android 6.7) - Logic update to Truck drop down on Clock In screen (20016)

Last Modified on 02/05/2026 1:41 pm PST

Previously, when a driver logged into the Driver App and was assigned to a single route, the Clock In screen still required them to select the Route field before the Truck drop-down would populate. The logic has been updated so drivers assigned to a single route can bypass the Route drop-down and select a Truck directly.

The screenshot displays the 'Clock In' interface of the NavuNav application. At the top, the title 'Clock In' is visible. Below it, there are several input fields. The first field is labeled 'Route' and contains the text 'RO_003 - Route'. The second field is labeled 'Truck' and contains the text 'TEST_TRUCK_RO_2'. This 'Truck' field is highlighted with a red rectangular box. Below the 'Truck' field, there are four more input fields: 'Start time' with the value '4:28 PM', 'State / Province', 'Odometer', and 'Engine Hours'. The 'Truck' field has a refresh icon (a circular arrow) on its right side.
