

# NavuNav (Android 6.7) - Loadman weights ignore Truck Scale UOM in NavuNav (19895)

Last Modified on 02/05/2026 1:48 pm PST

An issue has been resolved where weights received from Loadman in NavuNav were displaying in **lbs** instead of the **Scale UOM** configured on the truck setup (for example, **kgs**). Weights now display using the unit of measure defined in the truck's Scale UOM setting.
