

Inbound / Outbound (Operations) - Ability to Include up to Two Equipment Items Added to Inbound Receiving Tickets (19964)

Last Modified on 04/13/2026 7:46 am PDT

The **Inbound/Receiving Ticket** has been enhanced to allow up to two equipment items. The system logic has also been updated to account for tare weights associated with the selected equipment and automatically include them in weight calculations.

- **Equipment Info:** Provides up to two equipment types to be added. If an equipment is serialized, refer to Equipment Type 2 in the image example. When a serialized item is added, the system will prompt the user to search and link the specific equipment to the equipment type.
- **Added Logic:** If both the truck and equipment have pre-configured tare weights, the **Tare / Out** field will calculate automatically based on the combined tare weights. If a tare weight is recorded for only the truck or only the equipment, the tare weight field will default to zero, and both the truck and equipment will need to complete a weigh-in.

The screenshot displays the 'EDIT INBOUND / RECEIVING' interface for Ticket Number 42068 and Work Order 11093957. The main form includes fields for Site # 49334001, Scale Test QA, and address 421 W Las Tunas Dr, San Gabriel, CA 91776-1217. It also shows 'ORDER NOTES', 'TRUCK' (DocTruck), and 'VEHICLE INFO'. An 'EQUIPMENT INFO' modal is open, showing two equipment types: '6 Yard FL' and '10 Yard Open Top', with a search icon for 'EQUIPMENT 2' (S123). A red box highlights a gear icon in the 'VEHICLE INFO' section, and a red arrow points from it to the 'EQUIPMENT INFO' modal. The interface also features a 'Charges' section with options for 'Charges must match Equipment' and 'Charges must match Material', and a 'WO MINIMUM' field. At the bottom, there is a table with columns: GROSS, LABELS, NO CHARGE, CHARGE, UOM, CHARGE CODE, PER UNIT, VENDOR, MINIMUM, MINIMUM, TOTAL.

Pathway: *Operations > Inbound / Outbound > Inbound [tab]*
