

Yard (Setup / Operations) - Addition of Geolocation Button (21226)

Last Modified on 05/01/2026 2:03 pm PDT

The **Update Yard** screen includes a **Geo Locate** button next to the *Address Line 1* field. Selecting this opens the **Set Yard** map, where a location pin can be placed to accurately define the yard's position for driver navigation and routing.

The screenshot displays the 'YARD SETUP' interface. At the top, there are two green icons: a plus sign and a location pin. Below this is a table with columns for ID, NAME, and ADDRESS. The table contains three rows of data. An 'UPDATE YARD' modal is open, showing a form with the following fields:

FIELD	VALUE
NAME	HOMEBASEYARD
ABBREVIATION	Home
ADDRESS LINE 1	1234 S Pearland Ave
ADDRESS LINE 2	
CITY/STATE/POSTAL CODE	Pearland TX 77581-5123
INTERCOMPANY REVENUE SEGMENT	8053
GEOFENCE RADIUS (METERS)	10
AVERAGE DURATION (MINS)	0

A red arrow points to a green location pin icon next to the 'ADDRESS LINE 1' field in the modal.

Pathway: Setup > Operations > Yard
