

NavuNav (Android 6.7) - Enhancement to Support Different Device Font Sizes (21173)

Last Modified on 05/15/2026 12:54 pm PDT

In the NavuNav 6.7 release, enhancements have been made to improve the display of address information on the Stop Detail screen when larger font sizes are enabled on a device. Previously, increased device font settings could cause address text to wrap across multiple lines, impacting readability and screen spacing. The display has been updated to better accommodate accessibility font scaling and provide a more consistent user experience.
