

Route Management (Operations) - Approving Sequence Optimization Intermittent Error Fixed (21707)

Last Modified on 07/13/2026 3:17 pm PDT

An intermittent error was occurring when trying to Approve results from an Optimize Sequence process for certain routes. This issue has been resolved.

We also updated the approval process so that if the system runs into an issue with one schedule record, it will skip that specific record instead of throwing out the whole batch. This keeps the rest of the work moving forward smoothly.
